UW Lacertae in the Northern Sky Variability Survey

Martin Nicholson, Daventry, UK – newbinaries@yahoo.co.uk
Hannah Varley, Dublin, Ireland – hannahvfromdublin@yahoo.ie

UW Lac is an eclipsing binary of Algol type situated at 22:20:39.8 +42:24:29.

Although the quantity of reliable photometric data in the Northern Sky Variability Survey (http://skydot.lanl.gov/nsvs/nsvs.php) was limited to 85 points it proved possible to obtain an ephemeris that closely matched previously published figures.

A detailed description of the NSVS project can be found here.

NSVS Ephemeris - JD(min) = 2451508.620146 + 5.2832 * E

General Catalogue of Variable Stars data - SIMBAD data
