

TITLE OF THE PAPERFIRST AUTHOR ¹, SECOND AUTHOR ², THIRD AUTHOR ³, ...

- 1) First author's address, affiliation, e-mail address
- 2) Second author's address, affiliation, e-mail address
- 3) Third author's address, affiliation, e-mail address

Abstract: A brief abstract of the paper should appear here.Body of the paper, pictures, tables, diagrams, light curves, etc.
.
.
.
.
.***! Important notes !****Any references mentioned in your paper should appear in the standard format. First reference to the paper (Authors surname, YEAR). There should be full bibliographic reference at the end of the paper:*

- Surname, first letter of first name, YEAR, publication's title, Journal, issue #, page #, BIBCODE linked to ADS or Simbad or URL of on-line source

*Example:**"Forecast had been calculated using information from ASAS (Pojmanski, 2005) & GEOS database, and the list of RR Lyrae stars maintained by Gisela Maintz (Maintz, 2005)."**References should look like this:*

- Pojmanski G., 2005, ASAS-3, <http://www.astro.uw.edu.pl/~gp/asas/asas.html>
- Maintz G., 2005, RR Lyrae Stars brighter than 12.5 mag, (2005A&A..442..381M), <http://www.astro.uni-bonn.de/~gmaintz/>

ABOUT BIBCODE (taken from ADS help):*The bibliographic code is a 19 digit identifier which describes the journal article. The format was originally adopted by the SIMBAD and NED projects, and follows the syntax:***YYYYJJJJVVVMPPPA***where:***YYYY:** Year of publication**JJJJ:** A standard abbreviation for the journal (e.g. ApJ, AJ, MNRAS, Sci, PASP, OEJV, etc.).**VVVV:** The volume number (for a serial) or an abbreviation that specifies what type of publication it is (e.g. conf for conference proceedings, meet for Meeting proceedings, book for a book, coll for colloquium proceedings, proc for any other type of proceedings).**M:** Qualifier for publication:**L:** Letter**P:** Pink page**PPPP:** Page number. Note that for page numbers greater than 9999, the page number is continued in the m column.**A:** The first letter of the last name of the first author.*The fields are padded with periods (.) so that the code is always 19 characters long. The journal is left-justified within its 5 characters, and the volume and page are right-justified. New journal abbreviations should be unique, and follow existing naming conventions. As an example, the bibliographic code:*

1992ApJ...400L...1W *corresponds to the article: Astrophysical Journal Letters volume 400, page L1.*
2006OEJV...45....1O *corresponds to the article: Open European Journal on Variable stars volume 45, page 1*

Internet link behind the BIBCODE 2006OEJV...45....1O should point to URL:

http://adsabs.harvard.edu/cgi-bin/nph-bib_query?bibcode=2006OEJV...45....1O

We recommend you to consult Smithsonian / NASA's ADS web at <http://ads.harvard.edu> (direct link to search form is: http://adsabs.harvard.edu/abstract_service.html) where you can check for correct bibliographic references.

We also recommend you to use the Simbad database at CDS server in Strasbourg at <http://simbad.u-strasbg.fr> where you can check for other work done on a particular object and for catalogue data.
